# LIEBERT® CROSS CHASSIS/CABINET FROM 160 A TO 1250 A

#### **Secure Power Always**

Liebert CROSS by  $Vertiv^{TM}$  is a family of system static switches available in Cabinet versions from 160 to 1250 A and in both three and four pole versions. Liebert CROSS Chassis is available in 160 to 450 A, in the four pole version only. Liebert CROSS ensures maximum reliability to critical loads by eliminating system failures that are caused by problems in distribution rather than from the failure of the power source itself.

## Flexibility for Customised Solutions:

Liebert CROSS can be fully customised according to customers' load and environment requirements.

Options include priority mode operation, allowing users to select the preferred power source, selectable switching and tolerance features, galvanic isolation transformers, tripping coil switches, RFI filters, top cable entry connections and remote display units.

#### **Leading Technology**

A key function of Liebert CROSS is the Break Before Make transfer. This ensures that the two live feeds are never connected in parallel.

The Liebert CROSS static switch also ensures that switching between two power supplies occurs safely under both synchronous and asynchronous conditions relative to input waveforms.

#### Reliability

Employing a Liebert CROSS static switch adds another layer of security for mission critical loads.

It ensures a truly redundant power supply by enabling controlled switching between two independent AC power supply sources.

Switching is performed whenever the line that supplies power to the load goes out of tolerance.

Distribution downstream from Liebert CROSS is not only protected from failure of the power sources, but also against any failure in upstream lines.

#### Communication

An RS232 serial port and a voltage-free contact port are available in standard assembly versions and facilitate communication with installed power protection equipment.

LED and LCD displays offer complete and easy interaction with installed equipment and provide detailed information on the operational status of your equipment.

#### **Applications**

Liebert CROSS provides additional security for a wide range of mission critical applications including:

- Data centres /ISPs
- Call Centres
- Manufacturing Process Control
- Signalling Systems
- Safety Systems and Emergency Lighting
- Life Support Systems.

#### **Secure Power Always**

Simply supplying equipment will never deliver the level of business continuity our customers require. Vertiv offers a range of maintenance plans which will:

- Help deliver reliability to the load
- Extend the life of your power protection equipment
- Optimise your capital expenditure
- Provide risk management at a fixed cost
- Help to control your business environment
- Provide a pro active approach to disaster recovery.
